Oldenlandia umbellata

Oldenlandia umbellata

Scientific classification

Kingdom: Plantae
Division: Magnoliophyta
Class: Magnoliopsida
Order: Gentianales
Family: Rubiaceae
Genus: *Oldenlandia*
Species: ***O. umbellata***

Binomial name

Oldenlandia umbellata
L.

Oldenlandia umbellata (called **chay root** or **choy root**, from its Tamilname) is a low-growing plant native to India. A colour-fast red dye can be extracted from the root bark of (preferably) a two year old plant. Chay root dye was once used with a mordant to impart a red colour to fabrics such as calico, wool, and silk. It is grown on the Coromandel Coast in India.

Medicinal use

This plant is well-known in Siddha Medicine for its styptic property. It is also a drug that can be administered for bronchial asthma, as a decoction of the entire plant, a decoction made from its root and liquorice in the ratio-10:4, or the powdered root is given either with water or honey.

A decoction of the root also is a febrifuge.
